

CLAIMS

What is claimed is:

1. A radio communication device comprising:
a first notifying device that notifies of an incoming call by generating a ringer melody, said ringer melody including a plurality of melodic lines; and
a second notifying device that notifies of said incoming call, said second notifying device notifies of said incoming call based on one of said melodic lines.
2. A radio communication device according to claim 1, wherein said second notifying device includes:
a vibrator; and
a vibration control that controls said vibrator, wherein said vibrator is controlled by said vibration control to vibrate based on said one of said melodic lines.
3. A radio communication device according to claim 1, wherein said second notifying device includes:
a light emitter; and
a light-emission control that controls said light emitter, said light emitter is controlled by said light-emission control to emit light based on said one of said melodic lines.
4. A radio communication device according to claim

1, wherein said second notifying device includes:

a display that displays a graphic; and

a display control that controls said display, wherein said display is controlled by said display control to change said graphic based on said one of said melodic lines.

5. A radio communication device according to claim 1, further comprising a selector that selects one of said melodic lines, wherein said second notifying device notifies of said incoming call based on said one of said melodic lines selected by said selector means.
